

HDW3 Air Circuit Breaker

Reliable made affordable

About Himel

Himel is a multinational manufacturer and provider of electrical products that successfully combines global expertise with local knowledge. We focus on long-term partnership with customers and offer products that meet real needs and ensure adequate compatibility for common usage.

Our global footprint and technology allows to provide the best combination of affordable and reliable offers for low voltage power distribution, industrial automation and home electric in over 50 countries where we are present.

Reliable made affordable.

Selection Guide

Range Presentation

HDW3 is Himel 3 series comprehensive range of Air Circuit Breakers designed to distribute electric energy and protect overload, under voltage, short circuit and ground faults

HDW3 can be mainly used in power stations, factories, mines and modern high-rise buildings with smart power distribution system.

Application standard: IEC/EN 60947-2

Features

- ◆ 6 frame size: 1000,1600,2000,3200,4000,6300AF
- ◆ Rated current In (A): 400 - 6300
- ◆ Rated voltage AC Ue (V): 400/415, 660/690
- ◆ Poles: 3 & 4
- ◆ 3 type of intelligent controllers

Example: HDW316M163FH5554M: HDW3-1600M 1600A 3P Fixed breaker, M type controller, without accessory.

Note: 1000AF/1600AF the accessory is same parts.

Overview

Main Parameters

- Frame size: 1000,1600,2000,3200,4000,6300AF
- Rated current In (A): 400 ~ 6300
- Rated voltage AC Ue (V): 400/415, 660/690
- Poles: 3 & 4
- Installation method: Fixed type and draw-out type
- Wiring method: Horizontal rear connection, Vertical rear connection

Intelligent Controllers

iTR326 (basic type)
Basic protection (L, S, I & G)

iTR326A (standard type)
Basic protection

Accessories

- Motor operating mechanism: shunt coil, undervoltage coil, closing coil
- Intelligent controller accessories: N phase External transformer, Ground transformer, leakage current transformer, power module, Signal conversion module
- Lock: key lock, door lock
- Mechanical interlocking: cable interlocking
- Operation and protection: door frame, phase partition
- Indicator contact: auxiliary contact, alarm contact

Range of Application

HDW3 series air circuit breaker, the rated current is from 400A to 6300A, the rated voltage is 400V/415V, 660/690V, suitable for AC 50/60Hz and mainly used in Power distribution system networks, to distribute electric energy and protect the line and power supply equipment far away from the fault hazard of overload, under voltage, short circuit and single-phase grounding.

The circuit breaker can be widely used in power stations, factories, mines and modern high-rise buildings, especially the intelligent building power distribution system.

Application standard: IEC/EN 60947-2

Normal Working Condition

Environment temperature	Ambient temperature is -5°C ~+40°C(certification); mean value of 24h shall not exceed +35°C. It can also be used at ultimate temperature -40°C ~+70°C(L type, M type controller).
Altitude	≤ 5000m
Electromagnetic interference	Applies to Environment A
Class of pollution	Class of pollution level 3 Installation position shall be vertical, inclination of each direction shall not more than 5°
Installation level	Circuit breaker main circuit and undervoltage trip coil, power transformer primary coil are level IV, auxiliary circuit and control circuit is level III
Transportation condition	Move gentle, do not put upside down, avoid collision

Overview

Front Face

- 1 Open button
- 2 Closing button
- 3 Spring charge mechanism status indicator
 - Spring charged , closing is allowed
 -
 - Spring charged , closing is not allowed
 -

All derating data is calculated based on experiment and theory, only for selection guide.

Altitude derating table

Altitude below 2000 m will not affect circuit breaker performance. Above this altitude, the diminution of air insulation characteristics and cooling capacity must be considered; The correction coefficients given in the table below are used for installation above 2000 meters:

Altitude (m)	2000	2500	3000	3500	4000	4500	5000
Isolation voltage (V)	1000	910	910	830	830	770	770
Withstand voltage (kV)	12	10.5	10.5	9.5	9.5	9	9
Maximum operation voltage (V)	690	690	690	660	600	600	550
Current on 40 °C	1In	0.98In	0.93In	0.91In	0.87In	0.84In	0.81In

If altitude ove 4000m, please contact the manufacture.

Overview

Power loss and resistance per pole

Power loss is measuring at In,50/60Hz, input/output resistance is the value at cold state in per pole.

Intelligent Controller Protection

Intelligent controller protection characteristics are inverse time limit and constant time-lag, when fault Current exceeds inverse time limit set value, controller can have delay protection according to the constant time-lag.

Inverse time limit curve conforms to characteristic curve I^2t

Overload protection with long time delay

Threshold of overload protection with long time delay Threshold

$<1.05 I_R$: $>2h$ No tripping;

$>1.2 I_R$: $<1h$ Tripping

$\geq 1.2 I_R$: Tripping with time delay;

I_R Current setting range: $0.4I_n, 0.5I_n, 0.6I_n, 0.7I_n, 0.8I_n, 0.9I_n, 0.95I_n, 0.98I_n, 1.0I_n$

Inverse Time Protection Tripping Characteristics $I^2t: t=(6/N)^2 * t_R$

Setting electric current	Action time (s)								
$1.5 I_R$	16s	32s	64s	128s	192s	256s	320s	384s	480s
$2 I_R$	9s	18s	36s	72s	108s	144s	180s	216s	270s
$6 I_R$	1s	2s	4s	8s	12s	16s	20s	24s	30s

Note: N---- Overload current is divided from the setting current I/I_R

t---- time delay of overload current

t_R ---- time delay of setting value

Allowed tolerance of the tripping time $\pm 10\%$

Short circuit protection with short time delay

Threshold of Short circuit protection with short time delay

$<0.9 I_{sd}$: No tripping

$>1.1 I_{sd}$: Tripping;

$\geq 1.1 I_{sd}$: Tripping with time delay

I_{sd} setting range: $1.5 I_R, 2 I_R, 3 I_R, 4 I_R, 5 I_R, 6 I_R, 8 I_R, 10 I_R + OFF$

Short circuit current	Tripping Time		Formula of tripping curve		$I^2t: t=(8I_R)^2 tsd$			
$I_{sd} < 8I_R$	Inverse time protection	Setting time s	0.1	0.2	0.3	0.4		
		Min. s	0.08	0.14	0.23	0.35		
$I \geq 1.1I_{sd}$	constant time delay protection	Setting time s	0.1	0.2	0.3	0.4		
		Max. s	0.14	0.2	0.32	0.5		

Note: I_{sd} --- setting short circuit protection value

I---- short circuit current

I_R ---- setting current

t---- tripping time of short circuit

tsd ---- setting time delay of short circuit protection

Allowed tolerance of the tripping time $\pm 20\%$

Short Circuit Instantaneous Protection

Short Circuit Instantaneous Protection Action Threshold

$<0.85 I_i$: No tripping

$>1.15 I_i$: tripping

Instantaneous action current setting: $2I_n, 3I_n, 4I_n, 6I_n, 8I_n, 10I_n, 12I_n, 15I_n + OFF$

Note: tolerance of the tripping time $\leq 50ms$

Ground Fault Protection Action

Ground Fault Protection Action Threshold

$<0.9 I_g$: No tripping

$>1.1 I_g$: tripping

$\geq 1.1 I_g$: Tripping with time delay

Current	A	B	C	D	E	F	G	H	OFF
$I_n < 1250$	$0.2I_n$	$0.3I_n$	$0.4I_n$	$0.5I_n$	$0.6I_n$	$0.8I_n$	$0.9I_n$	I_n	
$I_n \geq 1250$	500A	600A	700A	800A	900A	1000A	1100A	1200A	

Ground current	tripping time	Inverse time protection formula of tripping curve	$t = \frac{(I_g)^2}{I^2} \times t_g$			
			Setting time	0.1	0.2	0.3
tg(s)	constant time delay protection	Setting time	0.1	0.2	0.3	0.4
		Min. (s)	0.08	0.14	0.23	0.35
		Max. (s)	0.14	0.2	0.32	0.5

Note: I_g ground protection setting, when $I_n \geq 1250A, I_J = 1200A$, when $I_n < 1250A, I_J = I_n$

I Ground fault current

T tripping time with time delay

t_g setting tripping time of ground fault

Allowed tolerance of the inverse tripping time $\pm 20\%$

Default setting

Tripping curves I^2t	over current		short circuit with time delay		Inst.	Ground fault		Thermal memory
	I_R	t_R	I_{sd}	t_s	I_i	I_g	t_g	
	$1I_n$	30s	$6I_n$	0.2s	$10I_n$	3P - "OFF" 4P - "G"	0.4s	20min

4 Undervoltage delay release		11 Connection, separation, test position locking mechanism		18 Power module
5 Motor operating mechanism		12 Mechanical interlocking		19 Signal conversion module

Note: 1000AF/1600AF the accessory is same parts.

Remote Operation

Shunt release MX

After circuit breaker is switched on, when shunt release is under specified power supply voltage, disconnect the circuit breaker instantaneously by remote operation.

- Rated control supply voltage AC220/AC230V, AC380/AC400V, DC220V, DC110V
- Operation voltage (0.7-1.1) Us
- Break-time: 50 ± 10ms

Closing coil XF

After spring be fully charged, Closing coil can make the circuit breaker close under the specified power supply voltage and can have remote operation.

- Rated control supply voltage AC220/AC230V, AC380/AC400V, DC220V, DC110V
- Operating voltage: (0.85-1.1) Us
- Closing time: 55 ± 10ms

Undervoltage release MN

After the breaker switch on , Undervoltage release will tripped circuit breaker instantaneously when power supply drop down between 70%-35% Ue.

The breaker can be switched on when the power supply is 85% Ue.

- Rated control supply voltage AC220/AC230V, AC380/AC400V
- Operation voltage: (0.35-0.7) Ue
- Reliable Closing voltage: (0.85-1.1) Ue
- Non closing voltage: ≤ 0.35Ue
- Delay time: 0.5s, 1s, 1.5s, 3s (1600, 4000), 1s, 3s, 5s (2000, 3200)

Under voltage release with time delay MNR

The MNR (when voltage drop) will switched off the circuit breaker with certain time delay , 0.5s, 1s, 1.5s, 3s(1600, 4000), 1s, 3s, and 5s (2000, 3200).

Motor Operating Mechanism MCH

When the circuit breaker is disconnected and power supply is available, motor operating mechanism can automatically charge the spring of the circuit breaker, so that the circuit breaker is disconnected or closed under the action of shunt excitation, undervoltage trip and closing electromagnet. In the absence of power supply, the handle can be used to store energy for the circuit breaker.

- Rated control supply voltage AC220/AC230V, AC380/AC400V, DC220V, DC110V
- Operation voltage: (0.85-1.1) Us
- Power dissipation: 75W/180W(1600), 85W(2000), 110W(3200), 180W(4000)
- Spring charging : <5s
- Utilization category: AC15, DC13

Accessory and Overview

Indication Contacts

Auxiliary Contact OF

4NO+4NC by default
 (4000H can provide 8NO+8NC and 6NO+6NC, 2000, 3200 also can provide 6NO+6NC)
 It can be used to monitor the status of circuit breakers, such as connecting circuit breaker position indicator and disconnecting indicator
 Rated thermal current I_{th}: AC380V/AC400V 0.75A, DC220V 0.15A, AC220V/AC230V 1.3A

Lock

Drawer Padlock

Lock provided by user
 If the padlock is provided by the user himself, and the circuit breaker is in the position of "separation", pull out the padlock plate. After locking, the crank handle cannot be inserted.

Keylock

The breaker can be locked by key lock in switch off position. When the key is inserted into the lock and turned on to "on" position, the breaker can be allowed to switched on. (Key turned off or removed from lock, breaker can be switched on)
 There are 3 options of key lock available (available for 2 Breaker Interlock & 3 Breaker Interlock)

• One lock one key

• Two locks one key

• Three locks two key

Drawer Position Locking Mechanism

It is a locker when the breaker is in the position of "connection," "test," and "disconnection" in a drawer type circuit breaker. Circuit breaker three positions are indicated through the indicator, the advance and retreat handle is locked in the exact position and is unlocked through the reset button.

Door Lock

It is suitable for cabinet frame of 2000 and 3200
 In drawer type circuit breaker, it is installed on the side of circuit breaker and linkages to distribution cabinet door. It can not be opened when the circuit breaker is connected or tested. The cabinet door can be opened in the open position. It can prevent the circuit breaker from slipping and causing damage.

Accessory and Overview

Operation and Protection

Mechanical interlock

- The mechanical interlocks are available for fixed and drawout circuit breakers, enabling the direct interlocking of the breakers, mounted side by side or stacked.
- The interlocking systems are available in one configuration for 2 breakers and in three others for 3 breakers.

Door Frame

- The door frame installed on the door of distribution cabinet can increase IP protection level to IP40
- It is applicable to stationary type and drawer type.

Phase Partition

- The insulation board installed in the middle of the breaker bus can increase the creepage distance and improve the insulation capacity

Controller Accessories

N Phase External Transformer

In a 3P+N grounding mode, an External transformer used to measure neutral phase current is harnessed to the wiring bus by the user

Ground Transformer

- A special External transformer is used to measure the earth current when the ground current returns. It can protect the upper and lower ground faults of the circuit breaker at the same time
- It is only applicable to iTR326H controller

Leakage Current Transformer

- When the earth protection is leakage type, a special rectangular transformer is added
- It is only applicable to iTR326H controller

Power Module

- It can provide auxiliary power for intelligent controller at the circuit of AC220V/AC230V, AC380V/AC400V, DC220V, DC110V
- Input is AC220V/AC230V, AC400V/AC380V, DC220V, DC110V, output is DC24V
 The input fluctuation range is 20%, the output fluctuation range is 5%, and the total power of 4 sets of DC24V is 7W.

Signal Conversion Module

- Output signal unit is applicable to communication function, such as regional interlocking, signal processing of four remote functions or fault alarm or indication, etc.
- It is only applicable to iTR326H controller

Electrical Schematic Diagram

iTR326、iTR326A Electrical schematic diagram

Wiring diagrams of iTR326, iTR326A intelligent controllers

Controller wiring annotations

- UM: Voltage test signal input
- 21#(UN), 22#(UA), 23#(UB), 24#(UC) represent the input ends of N, A, B, C phase voltage respectively.
- POW: External power input
- 1#(V1+), 2#(V2-): Auxiliary power input/output terminals, 1#(V1) is the positive terminal for DC
- SWT: Fault trip contact output
- 3#(S2), 4#(S1), 5#(S3): Fault trip contact output (4#(S1) is the common terminal), contact capacity: AC400V, 5A
- CT: External transformer, including external N-phase transformer or ZT100 or ZCT1(one out of three), where
- 25# - 26#: apply to external N-phase transformer input;
- 25# - 26#: apply to external ground transformer ZT100 input;
- 25# - 26#: apply to external leakage transformer ZCT1 input;
- Note 1: MN under-voltage release 27#, 28# wired on the main circuit line
- Note 2: Different powers can be applied respectively if the control power voltages for MN, MX, XF, MCH are different from each other, HDW3-1600 auxiliary switch offer 4a4b only; HDW3-2000&HDW3-3200 auxiliary switches can offer 4a4b and 6a6b; HDW3-4000 auxiliary switch can offer 4a4b, 6a6b and 8a8b, where 4a4b is a standard configuration, others need to be purchased separately (the dashed parts in the diagram are connected by the users);
- Note 3: Terminal 35# not only can be connected directly to the power (pre-store energy automatically), but also can be connected with the NO button in series then connected to the power (hand control energy pre-storage)
- Note 4: The controller should be connected to the power module, adopt iAPU334 power module when the power voltage is AC220V-AC400V; adopt iAPU332D when the power voltage is DC220/DC110V;
- Note 5: The auxiliary switch is 4a4b when HDW3-2000 and HDW3-2000 are circuit 47;
- Note 6: The auxiliary switch is 6a6b (5a5b) when HDW3-2000 and HDW3-3200 are circuit 51: 25#, 26#, 51# can not take the external transformer after forming a NO NC contact.

- Elements:
- MN Under-voltage release
 - MX Shunt release
 - XF Closed electromagnet
 - OF1-OF8 auxiliary switch
 - SB1 closing button
 - SB2 opening button
 - SB3 emergent disconnect button

Electrical Schematic Diagram

iTR326H Electrical schematic diagram

Wiring diagrams of iTR326H intelligent controllers

Controller wiring annotations:

- UM: Voltage test signal input
- 21#(UN), 22#(UA), 23#(UB), 24#(UC) represent the input ends of N, A, B, C phase voltage respectively.
- ZSI: Zone selective interlock
- 13#(Z+), 14#(Z-) are the zone selective interlock input DC24V
- 16#(Z1), 15#(Z1), 17#(Z2), 19#(Z3) are 3D0 output, adopt the optocoupler output, where 16# (Z1) is the common terminal
- POW: External power input
- 1#(V1+), (2# V2-): Auxiliary power input/output terminals, 1#(V1+) is the positive pole for DC.
- SWT: Fault trip contact output
- 3#(S2), 4#(S1), 5#(S3): Fault trip contact output (4#(S1) is the common terminal), contact capacity: AC400V, 5A
- COM: Communication output
- 10#, 11#: Communication outgoing lines of RS485A(485+), RS485B(485-) respectively, 12#: PE line, shield ground wire
- CT: External transformer, including an external N-phase transformer or ZT100 or ZCT1(one out of three), where
- 25# - 26#: Apply to external N-phase transformer input;
- 25# - 26#: Apply to external ground transformer ZT100 input;
- 25# - 26#: Apply to external leakage transformer ZCT1 input;
- Note 1: MN under-voltage release 27#, 28#, wired on the main circuit line
- Note 2: Different powers can be applied respectively if the control power voltages for MN, MX, XF, MCH are different from each other, HDW3-1600 auxiliary switch offer 4a4b only; HDW3-2000 and HDW3-3200 auxiliary switches can offer 4a4b and 6a6b; HDW3-4000 auxiliary switch can offer 4a4b, 6a6b and 8a8b, where 4a4b is a standard configuration, others need to be purchased separately (the dashed parts in the diagram are connected by the users);
- Note 3: Terminal 35# not only can be connected directly to the power (pre-store energy automatically), but also can be connected with the NO button in series then connected to the power (hand control energy pre-storing)
- Note 4: The controller should be connected to the power module, adopt iAPU334 power module when the power voltage is AC220V-AC400V; adopt iAPU332D when the power voltage is DC220/DC110V;
- Note 5: The auxiliary switch is 4a4b when HDW3-2000 and HDW3-3200 are circuit 47;
- Note 6: 25#, 26# are the external transformer input terminals, used for ground fault protection (3P+N)T; The auxiliary switch is 6a6b (5a5b) when HDW3-2000 and HDW3-3200 are circuit 51: 25#, 26#, 51# can not take the external transformer after forming a NO NC contact.
- Note 7: When the remote control is working, the signal conversion modules are needed, signal conversion module contact capacity is AC240V, 10A
- Note 8: The communication protocol is Modbus, iCAU486 or iCAU485 is needed to be ordered when Profibus or Devicenet protocol is used, the module uses DC24V electricity supply, the input end is connected to the secondary circuit 10#(485+), terminal 11#(485-), the output end is connected to the corresponding protocol bus.

Tripping Curve

Tripping Curve

3 phases protection

Ground protection

Ground Fault Protection

Ground Fault Protection

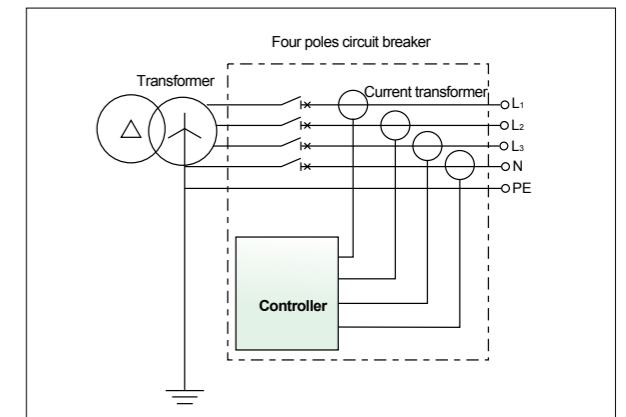

For definite earth-fault protection the setting current I_g can be adjusted $0.4-1 I_n$, can be setted "OFF", Delay time can be adjusted t_g $0.1-0.4$.

Protection ways Inverse timedelay protection and constant time delay protection is available.

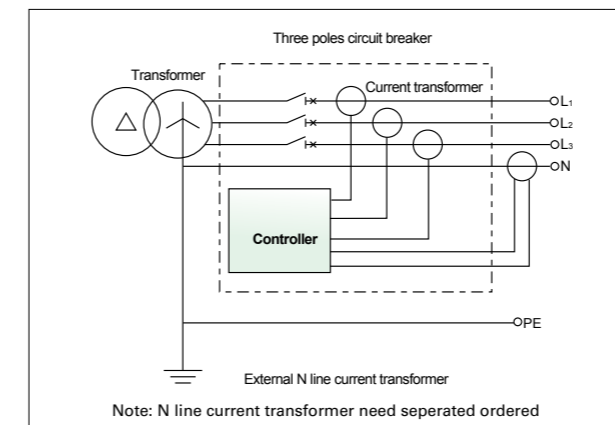

Vectorial summation type

HDW3 with three poles are used in the power distribution system of TN-C, TN-C-S and TN-S without additional current transformer of neutral line N. The signal of earth-fault protection from the vectorial summation of three poles of current.

HDW3 with four poles are used in the power distribution system of TN-S. The signal of earth-fault protection from the vectorial summation of three poles of current and N phase current.

HDW3 with three poles are used in the power distribution system of TN-S. N line current transformer connected externally, which is installed 2meters at maximum from the circuit breaker, takes the hole of earth-fault protection. The signal of earth-fault protection from the vectorial summation of three poles of current and N phase current.

Earth type of transformer center

TN-S distribution system selects transformer's center earth type protection. Earth transformer with transformer's center takes the hole of sampling earth-fault current. Earth-fault protection signal is from earth line of transformer.

Product Introduction

HDW3 automatic transfer controller is an intelligent ATSE controller with programmable functions, automatic measuring, LCD menu display, and digital communication. It can automatically realize voltage, frequency, phase etc. electrical parameters measurement and automatic control according to setting strategy which can reduce human operation error. It is an ideal product of ATSE.

HDW3 automatic transfer controller consists of microprocessor as core. 3-phase voltage and make precise recognition about abnormal voltage (over-voltage, under-voltage, missing phase, over-frequency, under-frequency) . This device considers fully the application with compact structure, advanced circuit, simple wiring, highly reliable, it can be widely applied to electrical devices, automatic control and debug system in industry of power, post and telecommunications, petroleum, coal, metallurgical, railway, mu

ATSEC2

ATSEC2

Two-source AC power input
Main power source and standby power source

functional parameter

- Graphic LCD 128x64 pixel;
- Two-source AC power input: 3-phase 4-wire;
- Measured values, settings, and message texts are supported in English and Chinese
- 10~30VDC power supply.
- Detection function for over-voltage, under-voltage, phase loss, reverse phase sequence, over-frequency, under-frequency;
- 8-channel programmable digital input (grounding effective);
- 10-channel programmable digital output;
- Integrated RS-485 isolation interface, MODBUS protocol;
- Storage of last 200 events;
- Real time clock
- All parameters are field programmable, use password access to avoid misoperation by unprofessional persons;
- The fixed washer is IP65 degree of protection
- Module structure design, Retardant PC cover, pluggable terminal, embedded installation mode, compact structure and easy installation;

How to order complete set of ATS with ACB

The complete set must including 2 or 3 set ACB cable interlock ,220VAC motor/shunt release /closing coil,ATS Controller
Do not install key lock with ACB, it will damaged the ACB when automatic transfer
Do not install the undervoltage release with ACB, It will impact ATS automatic transfer
Do not use ACB's MODBUS or remote signal to Switch ON/OFF breaker by MX/XF, It will impact the ATS automatic transfer

Cable Interlocking

Two Breaker Interlock C2

Interlock type A in which one of the two breakers (B1 or B2)can be switched ON. Each breaker must be equipped with a factory mounted interlock type A. Two cables are needed.

Three Breaker Interlock C3

Interlock type B in which one of the three breakers (B1, B2 or B3) can be switched ON. Each breaker must be equipped with a factory mounted interlock type B. Six cables are needed.

Three Breaker Interlock type CM

Interlock type A in which one of the two breakers (B1 or B2)can be switched ON. Each breaker must be equipped with a factory mounted interlock type A. Two cables are needed.
