## 24 DEVICES COVER COMMERCIAL, INDUSTRIAL, AND MILITARY TEMPERATURE RANGES

- Low-Power Consumption
- Wide Common-Mode and Differential Voltage Ranges
- Low Input Bias and Offset Currents
- Output Short-Circuit Protection
- Low Total Harmonic Distortion . . . 0.003% Typ
- High Input Impedance . . . JFET-Input Stage
- Internal Frequency Compensation (Except TL080, TL080A)
- Latch-Up-Free Operation
- High Slew Rate . . . 13 V/ $\mu$ s Typ
- Common-Mode Input Voltage Range Includes  $V_{CC+}$

NC—No internal connection

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## symbols

## description

The TL08\_ JFET-input operational amplifier family is designed to offer a wider selection than any previously developed operational amplifier family. Each of these JFET-input operational amplifiers incorporates well-matched, high-voltage JFET and bipolar transistors in a monolithic integrated circuit. The devices feature high slew rates, low input bias and offset currents, and low offset voltage temperature coefficient. Offset adjustment and external compensation options are available within the TL08\_ family.

Device types with a C suffix are characterized for operation from 0°C to 70°C, those with an I suffix are characterized for operation from –40°C to 85°C, and those with an M suffix are characterized for operation over the full military temperature range of –55°C to 125°C.

The D package is available taped and reeled. Add R suffix to device type, (e.g., TL080CDR).

schematic (each amplifier)

C1 = 18 pF on TL081, TL082, and TL084 only (including their suffix versions).  
Component values shown are nominal.

# TL082Y

## JFET-INPUT DUAL OPERATIONAL AMPLIFIER

SLOS081A–D2297, FEBRUARY 1977–REVISED NOVEMBER 1992

### chip information

These chips, when properly assembled, display characteristics similar to the TL082. Thermal compression or ultrasonic bonding may be used on the doped aluminum bonding pads. Chips may be mounted with conductive epoxy or a gold-silicon preform.

#### BONDING PAD ASSIGNMENTS

CHIP THICKNESS: 15 TYPICAL

BONDING PADS: 4 × 4 MINIMUM

$T_{jmax} = 150^{\circ}\text{C}$

TOLERANCES ARE  $\pm 10\%$

ALL DIMENSIONS ARE IN MILS

PIN (4) INTERNALLY CONNECTED  
TO BACKSIDE OF CHIP

# TL084Y JFET-INPUT QUAD OPERATIONAL AMPLIFIER

SLOS081A-D2297, FEBRUARY 1977-REVISED NOVEMBER 1992

## chip information

These chips, when properly assembled, display characteristics similar to the TL084. Thermal compression or ultrasonic bonding may be used on the doped aluminum bonding pads. Chips may be mounted with conductive epoxy or a gold-silicon preform.

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted)**

	TL08_C TL08_AC TL08_BC	TL08_I	TL08_M	UNIT
Supply voltage, $V_{CC+}$ (see Note 1)	18	18	18	V
Supply voltage $V_{CC-}$ (see Note 1)	-18	-18	-18	V
Differential input voltage (see Note 2)	$\pm 30$	$\pm 30$	$\pm 30$	V
Input voltage (see Notes 1 and 3)	$\pm 15$	$\pm 15$	$\pm 15$	V
Duration of output short circuit (see Note 4)	unlimited	unlimited	unlimited	
Continuous total dissipation	See Dissipation Rating Table			
Operating free-air temperature range	0 to 70	-40 to 85	-55 to 125	$^{\circ}\text{C}$
Storage temperature range	-65 to 150	-65 to 150	-65 to 150	$^{\circ}\text{C}$
Case temperature for 60 seconds	FK package		260	$^{\circ}\text{C}$
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	J or JG package		300	$^{\circ}\text{C}$
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	D, N, P, or PW package	260	260	$^{\circ}\text{C}$

- NOTES: 1. All voltage values, except differential voltages, are with respect to the midpoint between  $V_{CC+}$  and  $V_{CC-}$ .  
 2. Differential voltages are at the noninverting input terminal with respect to the inverting input terminal.  
 3. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15 V, whichever is less.  
 4. The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.

§ The temperature range of the C version is  $0^\circ\text{C}$  to  $75^\circ\text{C}$ , the I version is  $-40^\circ\text{C}$  to  $85^\circ\text{C}$ , and the M version is  $-55^\circ\text{C}$  to  $125^\circ\text{C}$ .

**TYPICAL CHARACTERISTICS†**

† Data at high and low temperatures are applicable only within the rated operating free-air temperature ranges of the various devices. A 12-pF compensation capacitor is used with TL080.

‡ The temperature range of the C version is 0°C to 75°C, the I version is -40°C to 85°C, and the M version is -55°C to 125°C.

**TYPICAL APPLICATION DATA**

**Figure 24. 0.5-Hz Square-Wave Oscillator**

$$f = \frac{1}{2\pi R_F C_F}$$

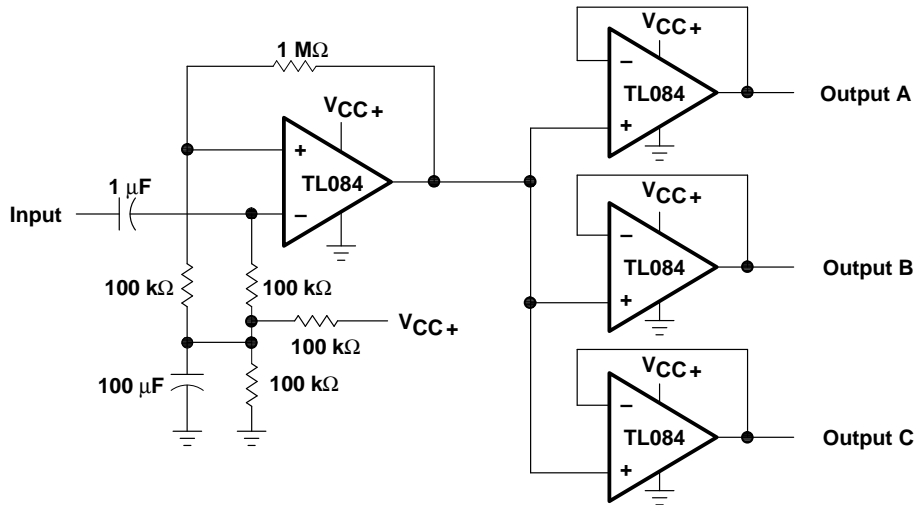

**Figure 25. High-Q Notch Filter**

$$R1 = R2 = 2(R3) = 1.5 \text{ M}\Omega$$

$$C1 = C2 = \frac{C3}{2} = 110 \text{ pF}$$

$$f_o = \frac{1}{2\pi R1 C1} = 1 \text{ kHz}$$

**Figure 26. Audio Distribution Amplifier**

NOTE A: These resistor values may be adjusted for a symmetrical output.

## **IMPORTANT NOTICE**

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

**TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.**

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
